ABOUT ME

I am a UX/HRI designer who translates complex robotic technologies into user-centered interaction experiences. My work focuses on robot service planning, interaction prototyping, and usability evaluation for AI and robotic systems. I aim to bridge the gap between technical possibilities and real user needs through research-driven design.

EDUCATION

Sep 2021 – Aug 2023

Yonsei University, Seoul, Korea, Republic of
- Master of Science in Industrial Engineering
- Major: Human-Computer Interaction (HCI), Advisor: Yong Gu Ji
- GPA: 4.06 / 4.3

Mar 2017 – Aug 2021

Sungshin Women University, Seoul, Korea, Republic of
- Bachelor of Social Science
- Major: Psychology
- GPA: 4.11 / 4.5

WORK EXPERIENCE

Sep 2024 – Present

UX Lead, AI Robotics Lab, Sogang University, Seoul, Korea, Republic of
(Project 1) Elderly-friendly Shared Autonomy for Teleoperated Robots in Superaged Society
(Project 2) Development of a continual intelligence-enhancing RaaS framework based on human-robot shared control
- Designed LLM-based robot teleoperation interfaces and conducted usability testing for AI robotic systems
- Designed end-to-end interaction flows from early concepts to high-fidelity prototypes
- Collaborated with engineers to align technical development with user-centered design principles
- Conducted psychology-based human-robot interaction (HRI) research and translated findings into UX requirements
-

Sep 2023 – Feb 2024

UX Designer, AI Robotics Institute, Korea Institute of Science and Technology (KIST)
(Project) Advanced Technology Development Project for Efficient Installation and Operation of Quarantine Treatment Facilities
- Planned AI robotic control services for quarantine treatment facilities and conducted scenario-based usability testing
- Designed psychology-based AI robotic research as part of individual studies and pres ented findings at IROS

Project

Aug 2024 – Present	**Elderly-friendly Shared Autonomy for Teleoperated Robots in Superaged Society** : Research project funded by the National Research Foundation of Korea (NRF) • Planned robot service scenarios through task analysis and field observations • Analyzed user characteristics and developed HRI design guidelines through desk research • Designed wireframes and robot interaction prototypes using Figma and ProtoPie • Identified user needs and pain points through user research and usability testing • Collaborated with social workers, developers, and engineers to translate UX insights into robot system and interface requirements • Submitted research findings to an SCI-indexed international journal (under review)
Aug 2023 – Feb 2024	**Investigating Behavioral and Cognitive Changes Induced by Autonomous Delivery Robots in Incidentally Copresent Persons** : Individual research funded by Korea Institute of Science and Technology (KIST) project of Intelligence on Multi-Robot Autonomy • Planned and validated UX scenarios for autonomous delivery robots • Investigated user perceptions of delivery robot behaviors in shared public spaces • Presented research findings at IEEE/RSJ International Conference on Intelligent Robots and Systems (IROS)
Aug 2021 – Feb 2022	**Interface Optimization Research for Autonomous Driving UX** : Research project funded by Hyundai Motor Company • Conducted user research to identify pain points and needs in existing infotainment systems • Designed multimodal infotainment interfaces, including navigation, to enhance UX • Performed usability testing and data analysis to validate the enhanced system
